

Effluent treatment plant is designed by using proprietary hollow fiber membrane with process know-how to treat various effluents to overcome several environmental problems. For reducing the BOD, COD, Color, Nitrogen and toxic level of the effluent, MEMFILL Tech is offering solutions from activated sludge process to advance membrane tech with less foot print.

Benefits

- Low operation cost
- Lesser foot print
- Low O&M cost
- Trained Service team after sales
- Designed as per the PCB norms
- High throughput
- Less amount of sludge cake disposal
- High efficiency when compared with conventional plant

Applications

- Mining Industry
- Biotech Industry
- Petrochemical Industry
- Wines and Distilleries
- Paper and Pulp Industry
- Agro Industry
